

June 19, 1987

TO: File

FROM: Frank J. Filas, Reclamation Engineer 

RE: Site Inspection, M/041/008, United States Gypsum Co.

On June 12, 1987, Frank Filas, Frank Jensen, and David Wham, of the Division, met onsite with Jim Jennings, Quarry Superintendent, at U.S. Gypsum's Sigurd quarries. The mine operation currently covers about 80 acres.

A mine and reclamation plan was submitted to the Division in 1977, but this plan was never reviewed or approved. No reclamation work has been performed during the past 10 years, except for a small area where reclamation was just recently initiated. Regrading appeared to be progressing nicely in this area.

U.S. Gypsum has elected to file a revised mine and reclamation plan. We reviewed a draft copy of this plan and offered several suggestions. This plan is nearly complete, and will be submitted to the Division before July 1, 1987.
